CLAIM OF INVENTION: PAGE 1

What I claim as my invention is a sensor activated lighted bottle cap tunnel with obstacle ribs.

All of the materials that were used for my invention were purchased by myself.

The idea and time spent on the unit are my own with help from no one.

The products used to construct my invention have been invented before, but in the manner in which I used all materials gave me the aid in the creation of my invention.

I claim that all of the construction was completed by myself.

In the manner of the way the unit does function, all of the materials that were used are necessary for the invention.

I have searched and found no other sensor activated lighted bottle cap tunnel with obstacle ribs.

I claim my invention is a first and seek protection on the concept, construction, function, and the manner in which the following listed numbered items operate the unit. I also address that these listed items can be in many different mathematical measurements. I am seeking protection that the invention may be constructed from the items listed below in different mathematical configurations. I hope to protect the utility patent application as applied for.

LIST AS FOLLOWS:

- 1. THE FRAME OF THE INVENTION- ANY STRONG MATERIAL MAY BE USED.**

The way the frame functions as stated previously that this is different from any other.

- 2. THE OBSTACLE RIBS THAT ARE PART OF THE INSIDE WALLS- ANY STRONG MATERIAL MAY BE USED.**

The way the obstacle ribs function there has been none ever used before for a bottle cap tunnel.

- 3. THE LIGHTING DESIGN AND SCHEMATIC WITH THE ELECTRONIC COMPONENTS.**

No other sensor activated lighted bottle cap tunnel has ever been invented before in the manner in which my sensor activated lighted bottle cap tunnel functions.

CLAIM OF THE INVENTION: PAGE 2

My invention of the sensor lighted bottle cap tunnel takes a new step in the field of technology.

Other "bottle cap catchers" that I have seen and reviewed either through use of the "web" or other methods have been virtually produced the same results. Most bottle cap catchers that I have reviewed are not anything close to what I have invented. I have reviewed the plain "box" type looking bottle cap catchers and one that was a bottle cap catcher magnet.

The fact that I have addressed much time and effort into this invention I think that the way the invention operates it creates a novelty and utility for consumers to utilize.

Other than a few bottle cap catchers I have reviewed have no novelty to them what so ever.

The lights flashing creates a fun atmosphere for the consumer.

The fact that the lighting pattern can be adjusted by a consumer and the bottle cap having to strike obstacle ribs "clanking back and forth" on it's way down the bottle cap tunnel is a brand new idea that I have not seen any where.

This invention is a continuation on a previous application. As stated in the background of the invention, I would like to keep the previous application up for your panel to review. That application number is 10/279497. I applied for this application on 10-24-2002.

I am seeking a new patent application number for this invention.

I am seeking protection from the United States Patent and Trademark Office on this brand new information included in the plastic envelope.
